

What information is required when specifying your new Jost mechanical suspension?

1. Are you fitting a round or square axle to the suspension?

2. The over slung F-Type suspension is generally used on Single, Tandem and Tridem Semi-Trailers, the under slung J-Type suspension is used on the front interlink trailer.

3. How many axles required for your trailer: 1-2 or 3axles?

Single axles on drawbar trailer

Tridem trailer

4. How many leaves do you require in the spring pack?

Spring packs are available in 7, 8 or 9 blades per pack. The more blades in the pack the higher the load the suspension will be able to carry.

In order to reduce shock loads and prolong the life of the spring pack, **Jost** suspensions also offer as standard equipment a polyurethane spring saver instead of the traditional retainer bolt tube. Spring savers are available in 3 versions, for 7-8 or 9 blade springs.

Unprotected retainer bolt tube

Jost polyurethane spring saver.
