

KEITH - rigid truck walking floor

JOST now has a 24 plank floor that is built into a rigid truck for the farming industry, This is the first 8 meter **KEITH** walking floor to be built into a 16 ton 6x4 rigid truck in South Africa.

The advantages to the farmer are:

- Horizontal loading and unloading even on the farm lands.
- The **KEITH** walking floor can't fall over like a tipper and can load and unload palletized goods.
- The **KEITH** walking floor by **JOST** can load and unload bulk items like maize, manure, sunflower and many others and if a tarp is fitted on the floor they could also transport sand and stone.
- This transport option can be used in the place of a Tipper / Flat deck trailer/ on road and off road/Transporting of farm produce to the market.
- This vehicle can also very easily move farm workers to and from their homes.
- There are many other options and items that can be transported on this one multi-purpose vehicle.

KEITH - rigid truck walking floor

KEITH 21 plank aluminium walking floor in a rigid truck application.
